- Check if the charger provides the appropriate power output (at least 100W for fast charging).
- Inspect the cable for visible damage; if the cable is frayed or broken, replace it.

2. Data transfer is not happening:

- Make sure both devices support data transfer through USB-C.
- Try using the cable with different devices to verify if the issue is with one particular device.

3. The cable seems to be damaged:

- Check if the cable has been bent excessively or exposed to moisture. Replace the cable if necessary, especially if it's no longer functioning properly.
